

Explore the world of water bugs

Waterways are home to many creatures, including water bugs. The types of water bugs and the number of them living in the water can help us understand how healthy the water is.

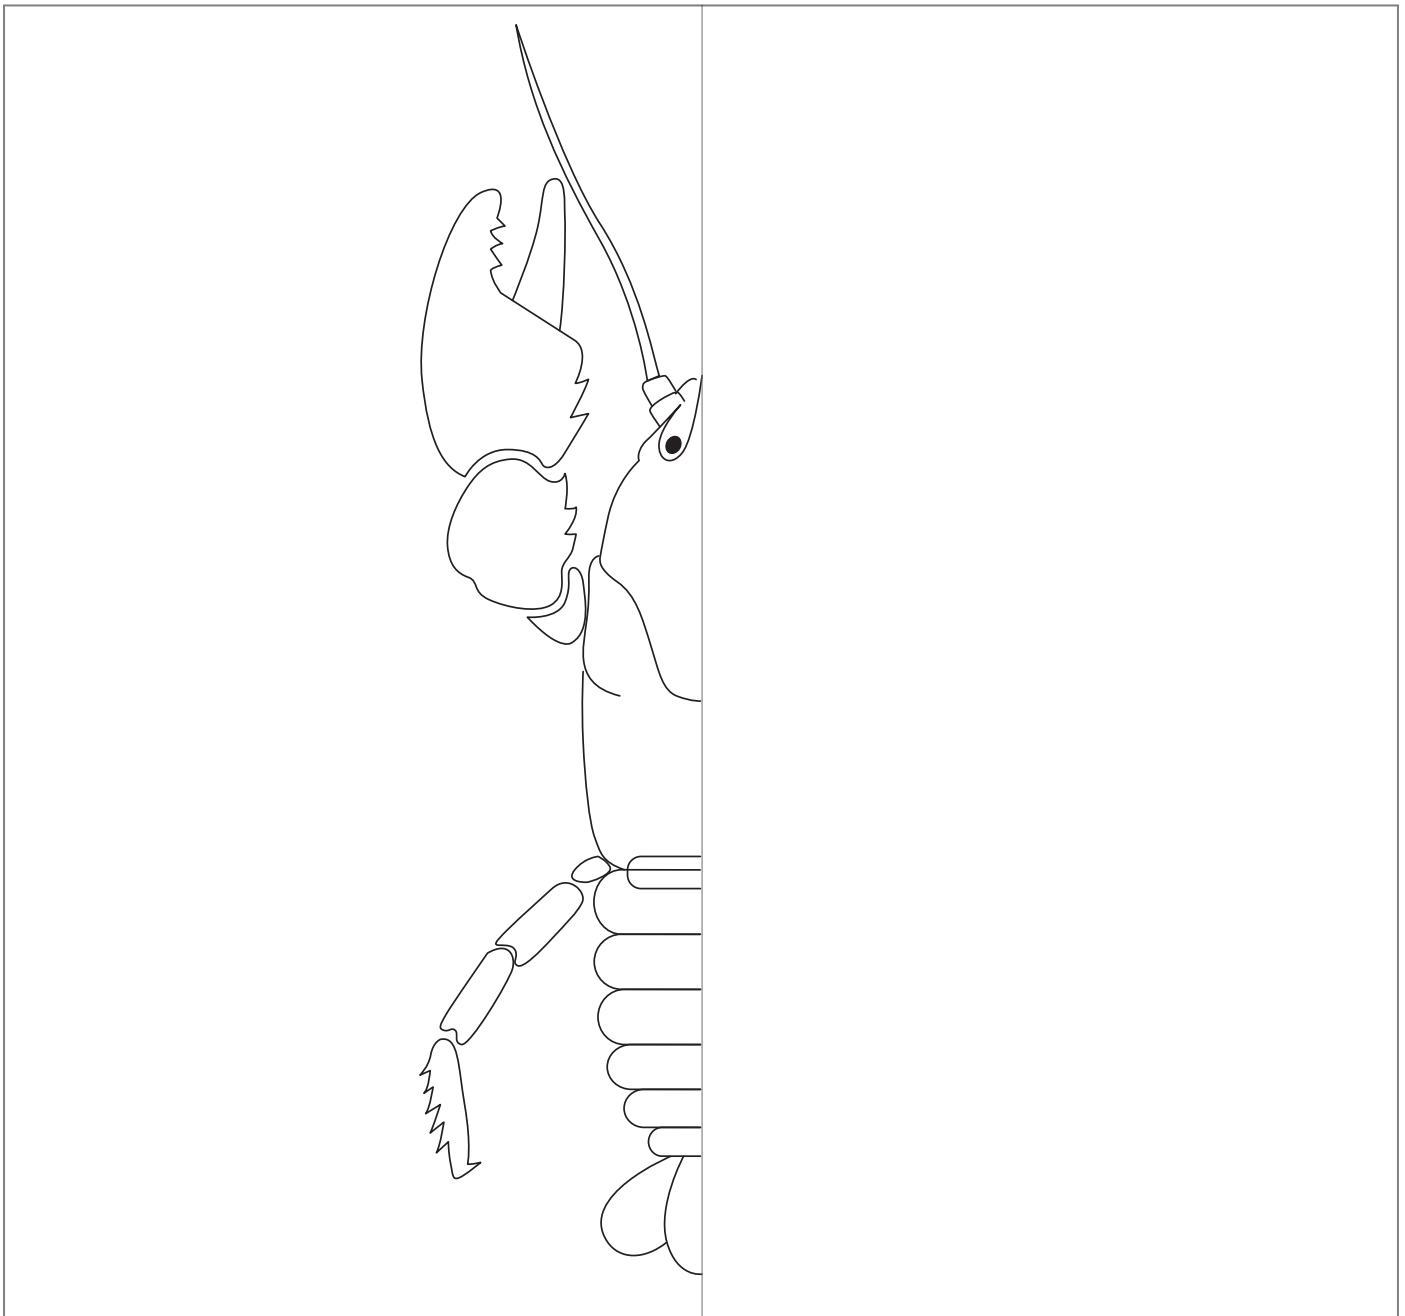

Freshwater Crayfish

Use the line of symmetry to help you draw the mirror image of your bug.

 Freshwater Crayfish burrow amongst rocks, wood and leaves on the streambed of slow-moving streams.

 They eat plants, insects and fish.

 Freshwater Crayfish have excellent eyesight.

How sensitive is your bug to pollution in the water?

| Very tolerant | | Tolerant | | Sensitive | | Very sensitive | | | |
|---------------|---|----------|---|-----------|---|----------------|---|---|----|
| 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 |
